

ID Update

MARCH 2010

News update about products and services from Databac Group, leading manufacturer and supplier of complete ID solutions since 1970.

Comply with the CRB directive with our student & staff ID card printing stations

Simple and secure registration and time recording using PIN, card and fingerprint

Manage visitors to your school using kiosk terminals, visitor books or automated systems.

Restrict and control access to school PCs and networks with a choice of logon devices.

Our partners

Issue your own staff & student IDs

Make sure you conform with Criminal Records Bureau requirements for child safety and issue secure photo ID cards to staff and visitors. Our affordable ID printing systems are available from just £795 (€895). This includes a two-in-one card printer/reprinter, which can be used to print full-colour ID badges,

as well as visitor and temporary IDs using our Data ReWrite™ cards. These can have visitor data printed, erased and re-printed up to 500 times. Included in the kit is our Dataimage card design and management software, a camera, a colour ribbon and both standard and reprintable cards.

Databac card printing systems are used at many schools around the UK. They come with a choice of functionality depending on needs, such as print speed, encoding options and more.

Our branded lanyards and card holders complement these systems and are ideal for promoting a professional image for any school. We also offer installation and on-site training anywhere in the UK.

If you prefer to outsource card printing, we offer a bureau service. Please call us for details.

Registration and time recording

Technologies available

- Card
- PIN
- Card+PIN
- Fingerprint
- Fingerprint +card
- Palm vein
- Facial recognition

Ideal for students, teachers and visitors alike. Databac's range of registration, time recording and access control systems start from just £395. We offer a range of easy-to-use, sophisticated systems using RFID card and/or biometric technologies which bring together multiple applications within a single system. In this way, time recording and access control can be integrated with other functions such as catering, access control, student registration and even cashless vending. If you are worried about biometric data residing on a central database, we

have systems which encrypt and store it on RF cards instead. Fingerprints are authenticated against the template on the card when logging in and out.

Now you can eliminate unauthorised PC access

It is the challenge of any teacher or parent. Managing what children can access on a PC or the internet. There is much inappropriate content online that they would love to get their hands on! Just as important is monitoring who they are talking to using email, instant messaging and social networks. They are common forms of communication between friends but it can leave them open to imposters.

Databac offers a range of Windows logon (or 'logical access') solutions that secure access to PCs, networks and programs. Products such as Palm Secure read the palm of your hand so you or your students will never need to remember a password again. There is no physical contact with the reader, so it is very hygienic. It has unsurpassed accuracy and is already in use by educational establishments worldwide.

With HID-on-the-Desktop, your RFID cards become your logon token. It offers two-factor authentication (card + PIN) and is simple to install and use. Install the naviGo software, connect the reader and use your card. You can also power a PKI solution without having to choose one system or the other.

Your trusted card manufacturer

Did you know that Databac has been manufacturing cards since 1970? We make cards incorporating a range of technology to work with card-based logon devices, as well as access control, time & attendance, visitor control and vending systems. We are the only licensed manufacturer of LEGIC cards in the UK and are authorised to produce cards using a wide range of technologies. What's more, we are set up for the production of multifunction cards, in materials including recyclable PET and polycarbonate.

Manage visitors to your school

Visitor systems are a prerequisite for CRB regulatory compliance. Our self-expiring visitor labels offer an easy entry into visitor control. These record the time and date that visitors enter and leave the school and can be printed with your school logo.

If you prefer an automated system, our Dataimage visitor software enables you to print paper passes, adhesive passes and plastic ID cards. Barcode scanners and smart card readers offer automatic log-in and -out. Dataimage can print out emergency lists at a push of a

button to see who is in the building. It can generate fast reports on visitor data. You can set it up to alert you directly of unauthorised people and network it to work from multiple points of entry.

Our kiosk terminals enable easy self-registration and can be programmed as an information station for visitors.

By using our Data ReWrite cards you can reuse plastic visitor cards up to 500 times, saving both money and the environment.

News in brief... news in brief...

Thank you!

A big thank you to all our customers! Because of your continued and loyal custom, we are happy to be celebrating our 40th anniversary this year. We have been making ID cards since we were established and we are proud that, today, we are still an independent, family-based company.

Card technology has changed over the past four decades. We used to make traditional lamination pouch photo IDs; now, our enterprise has truly gone digital. Plus we have expanded our range to comprise complete ID solutions – from biometric ID systems to accessories that allow you to wear, store and protect cards.

We will be celebrating our anniversary with special offers throughout the year, so keep checking our web site at www.databac.com. Our first offer: a 10% discount on orders over £100.

Green ID

For our environmentally-conscious customers, we offer a host of eco-friendly ID products. We have been making recyclable cards for over 15 years and today we manufacture a range of recyclable and biodegradable ID cards.

Many of our accessories, such as lanyards and card holders, can be custom-printed with your name and logo to enhance the school's image. These are available in recycled and organic materials, including cork and bamboo. With a minimum production quantity of just 100, you could opt for colour-coded lanyards for different areas of the school – you could even offer them for sale to visitors. See www.databac.com.
